International Rectifier

IRF1404ZPbF IRF1404ZSPbF IRF1404ZLPbF

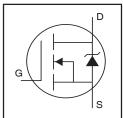

Features

- Advanced Process Technology
- Ultra Low On-Resistance
- 175°C Operating Temperature
- Fast Switching
- Repetitive Avalanche Allowed up to Tjmax
- Lead-Free

Description

This HEXFET® Power MOSFET utilizes the latest processing techniques to achieve extremely low onresistance per silicon area. Additional features of this design area 175°C junction operating temperature, fast switching speed and improved repetitive avalanche rating. These features combine to make this design an extremely efficient and reliable device for use in a wide variety of applications.

HEXFET® Power MOSFET

V _{(BR)DSS}	40V
R _{DS(on)} typ.	2.7m $Ω$
max.	$3.7m\Omega$
I _{D (Silicon Limited)}	180A®
I _{D (Package Limited)}	120A

Notes on Repetitive Avalanche Curves, Figures 15, 16: (For further info, see AN-1005 at www.irf.com)

- 1. Avalanche failures assumption: Purely a thermal phenomenon and failure occurs at a temperature far in excess of T_{jmax} . This is validated for every part type.
- 2. Safe operation in Avalanche is allowed as long asT_{jmax} is not exceeded.
- 3. Equation below based on circuit and waveforms shown in Figures 12a, 12b.
- 4. P_{D (ave)} = Average power dissipation per single avalanche pulse.
- 5. BV = Rated breakdown voltage (1.3 factor accounts for voltage increase during avalanche).
- 6. I_{av} = Allowable avalanche current.
- 7. $\Delta T = Allowable$ rise in junction temperature, not to exceed T_{imax} (assumed as 25°C in Figure 15, 16). t_{av} = Average time in avalanche. D = Duty cycle in avalanche = $t_{av} \cdot f$

 $Z_{thJC}(D, t_{av})$ = Transient thermal resistance, see figure 11)

$$\begin{split} P_{D \; (ave)} &= 1/2 \; (\; 1.3 \cdot BV \cdot I_{av}) = \triangle T / \; Z_{thJC} \\ I_{av} &= 2\triangle T / \; [1.3 \cdot BV \cdot Z_{th}] \\ E_{AS \; (AR)} &= P_{D \; (ave)} \cdot t_{av} \end{split}$$

D²Pak Tape & Reel Information

Notes:

12

- ① Repetitive rating; pulse width limited by max. junction temperature. (See fig. 11).
- ② Limited by T_{Jmax} , starting $T_J = 25$ °C, L = 0.11mH $R_G = 25\Omega$, $I_{AS} = 75$ A, $V_{GS} = 10$ V. Part not recommended for use above this value.
- $\ \, \oplus \, C_{oss}$ eff. is a fixed capacitance that gives the same charging time as C_{oss} while V_{DS} is rising from 0 to 80% V_{DSS} .
- S Limited by T_{Jmax}, see Fig.12a, 12b, 15, 16 for typical repetitive avalanche performance.
- © This value determined from sample failure population. 100% tested to this value in production.

- This is only applied to TO-220AB pakcage.
- This is applied to D²Pak, when mounted on 1" square PCB (FR-4 or G-10 Material). For recommended footprint and soldering techniques refer to application note #AN-994.
- 9 TO-220 device will have an Rth value of 0.65°C/W.
- © Calculated continuous current based on maximum allowable junction temperature. Bond wire current limit is 120A. Note that current limitations arising from heating of the device leads may occur with some lead mounting arrangements.
- ** All AC and DC test condition based on former Package limited current of 75A.

Data and specifications subject to change without notice. This product has been designed and qualified for theIndustrial market.

Qualification Standards can be found on IR's Web site.
